

DEXAZONE INJECTION

Global Excellence in Animal Health

PRESENTATION

A clear colourless water-miscible solution suitable for parenteral administration to domestic animals.

Each ml. contains: 2mg Dexamethasone as Dexamethasone Sodium Phosphate BP. 20 mg Benzyl Alcohol as a preservative.

USES

Dexamethasone is a synthetic corticosteroid with an extremely potent anti-inflammatory activity. It is used to suppress inflammation in arthritic conditions and dermatoses and for its glucogenic activity in bovine ketosis. It is indicated in the treatment of inflammatory and allergic conditions, acetonemia, non-specific dermatoses, shock and stress.

DOSAGE ADMINISTRATION

Cattle 5-20ml,

Calves, Pigs, Sheep and Goats, 1-5ml

Dogs 0.25ml - 2ml

Cats 0.25ml - 0.5ml

By intramuscular or intravenous injection.

CONTRA-INDICATIONS, WARNINGS, ETC

Do not use on animal in late pregnancy. Abrupt termination of therapy should be avoided by gradual decrease in dosage over period of two weeks. Conditions such as diabetes mellitus, hypertension, renal insufficiency and decreased cardiac reserve must be considered as relative contra-indication. Infectious conditions require special consideration. Users of the product should take appropriate protective precautions.

PHARMACEUTICAL PRECAUTIONS

Store in a cool place and protect from light.
