

# BIMEDA MILKING SALVE

Global Excellence in Animal Health

## DESCRIPTION:

An antiseptic milking jelly for the lubrication of teats and milker's hands during milking. Regular use of BIMEDA MILKING SALVE is recommended for prevention of mastitis and external infections on the teats and udder in dairy animals.

## COMPOSITION:

0.55% Diclorophene B.P. & 2.0% Lanolin.

## BENEFITS:

- Easy milking due to good lubrication.
- Aids in rapid healing of cuts, cracks and abrasions on the udder and teats.
- Aids in preventing mastitis and external infections by disinfecting the teats and udder.
- Can be used in cattle, dairy goats and even dairy camels.
- Can be used for hand milking and machine milking.

## ADMINISTRATION:

Method of Use /Application

Ensure the teats, udder and milker's hands are washed clean and then dried with a clean milking cloth before using BIMEDA MILKING SALVE.

## DOSAGE:

Use quantities to achieve sufficient level of lubrication.

## Hand Milking:

Apply BIMEDA MILKING SALVE on hands and massage onto the teats before and after milking for lubrication and to prevent chapping of teats.

## Machine Milking:

Apply BIMEDA MILKING SALVE on the teats before inserting the teat cups. Milk normally and apply the salve on the teats again after milking.

## STORAGE:

Store below 30°C.

## AVAILABLE PACKS:

100 gm, 250 gm, 500 gm, 1 kg and 2 kg.
